Miss Alice B. Moran
Department of Animal Pathology
Kentucky Agricultural Exp. Sta.
Lexington, Kentucky

Dear Miss Moran:

This inquiry concerns a culture of *S. sandiego* described in a paper by Edwards, Moran and Bruner 1946, Proc. Soc. Exp. Biol. 62:296. The culture is described as flagellated, but completely and irreversibly non-motile.

I have already corresponded with Dr. Edwards and Dr. Bruner concerning this culture, but in the course of their moving from Lexington they both appear to have lost track of it. I am therefore addressing a request to you, in the hope that it may have been preserved within your cognizance.

We are interested in this culture in connection with a genetic study of flagella and motility under way in this laboratory. Any assistance you might be able to afford would be appreciatively received.

Yours sincerely,

Joshua Lederberg
Associate Professor of Genetics
